

MC-RockMortar MW F (Previously known as MasterPlas MW F)

Polymer-modified Sculpting Mortar

Properties

- Lightweight formulation enabling high build in overhead position
- One-component, polymer modified, chloride free and hydraulic mortar
- Suitable for spray application by wet-spray techniques
- Suitable for thickness of 5 to 50 mm
- Shrinkage-compensated and excellent adhesion
- Ideal application and hardening times
- Available in many colors.

Areas of Application

- Concrete repair of large area and catching of small and localized structural repairs. MC-RockMortar MW F provides a protection for embedded steel reinforcement. It is ideal for vertical and overhead repair operations.
- Light weight built-up in landscaping or sculpturing works.

Application

Surface Treatment

The surface must be clean and free from all loose particles dust, oil and other contaminants. The substrate must have sufficient roughness, e.g. sound aggregates should be visible.

Manual Application

Before application of MC-RockMortar MW F, a polymer cement slurry bonding coat should be brushed into the pro-wetted surface. The surface should be moist but saturated with water. Very absorbent substrates have to be ore-moistened several times I necessary. The high build repair mortar. MC-RockMortar MW F should then be applied "fresh-on-fresh" to the bond coat by trowel or float. The bond coat shall be based on MC- Bond Coat.

Mixing

MC-RockMortar MW F is a single-component mortar which is mixed with water. The dry powder is slowly added to water and mixed thoroughly until a homogeneous, creamy consistency is achieved. Forced action mixers are recommended. Mixing should take approx. 3 minutes. Mixing by hand is not permitted. Use full pack-sizes only.

Mixing Ratio

For a 25 kg sack of MC-RockMortar MW F, approximately 3.8 – 4.0 litres of water is required. As with all cementitious products, the quantity of water needed may be varied lightly.

Application

MC-RockMortar MW F can either be applied by hand with floats or trowels, or by wet-spray techniques.

It is recommended to apply in layers of up to 50 mm each. For thicker application, apply overcoat only after the previous coat has attained the final set. MC-RockMortar MW F should not be applied at temperature below +5°C (air and substrate). Before application of overcoat all loose particles on the surface shall be removed.

Curing

Care must be taken to ensure MC-RockMortar MW F is suitably protected to prevent it from drying out too rapidly, especially from the effects of direct sun and wind. As with all cementitious materials, it shall be protected from rain before its final set.

General

Coverage depends on texture and porosity of the substrate. To determine this exactly, a trial area should be laid and coverage noted.

BE SURE. BUILD SURE.

Technical Data for MC-RockMortar MW F (All values given relate to +25°C and 60% relative humidity)

Characteristic	Unit	Value	Comments
Grain size	Mm	<1.2 mm	
Fresh Wet Mortar Density	kg/dm ³	1.80	
Compressive Strength	N/mm ²	10.0	7 days
		15.0	28 days
Flexural Strength	N/mm ²	2.0	28 days
Bond Strength	N/mm ²	0.6	28 days
Linear Shrinkage			No Crack (Coutinho Ring method)
Mixing Ratio	liters	4.8 – 5.0	per 25 kg bag
Setting time	Initial set	3-4 hours	at +27°C
	Final set	5-6 hours	
Layer Thickness	mm	5	minimum
		50	maximum
Yield	liters	18.5	per 25 kg bag
Minimum Application Condition	°C	>+5°C	substrate and ambient temp.
Mixing ratio	p.b.w.	100 : 15 -16	MC-RockMortar MW F: water * Refer to the water dosage on the respective bags, as this may vary for different mortar colors

Product Characteristics for MC-RockMortar MW F

Delivery	25 kg \ 20 kg bags
Storage	Can be stored in cool and dry conditions for at least 12 <i>months</i> in original unopened bags.
Disposal	In the interest of the environment, please empty all bags completely & dispose in accordance with local regulations.

Safety Advice

Please take note of the safety information and advice given in the packaging labels and safety information sheets.

Note: The information on this data sheet is based on our experiences and correct to the best of our knowledge. It is, however, not binding. It has to be adjusted to the individual structure, application purpose and especially to local conditions. Our data refers to the accepted engineering rules, which have to be observed during application. This provided we are liable for the correctness of this data within the scope of our terms and conditions of sale-delivery-and-service. Recommendations of our employees which differ from the data contained in our information sheets are only binding if given in written form. The accepted engineering rules must be observed at all times.
